

LG CNS + Surgere

Transforming factory logistics and inventory control

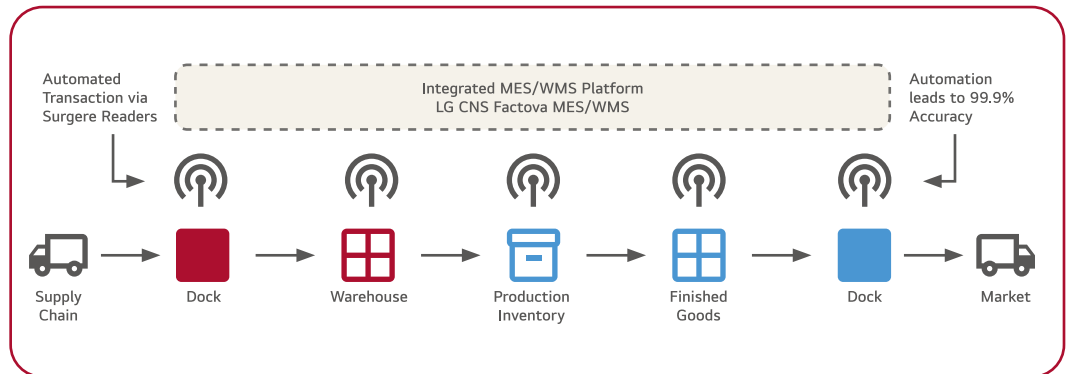

What is so challenging with Factory inventory control and material logistics?

- Highly Manual – which is costly
- Human error leads to inaccurate inventory counts
- Frequent WIP shortage due to inaccurate tracking
- Potential production schedule disruptions from inaccurate inventory
- It is impossible to predict future bottleneck scenarios

LG CNS and Surgere deliver a fully automated factory logistics solution that synchronizes MES and WMS with real-time, 99.9% accurate material tracking

- Optimize and Plan your factory logistics with LG CNS digital twin technology
- LG CNS provides integrated MES and Warehouse Management in one solution
- Surgere provides high fidelity, automated RFID location and transaction services with 99.9% accuracy
- LG CNS can provide full automated mobile robot solutions for factory logistics

Join our early adopter program and shape the future of autonomous factory logistics

- We are looking for manufacturing partners to join our program to participate in the development our next generation MES and inventory control solution with Surgere.
- Manufacturers who are interested can participate in early proof of concept trials with LG CNS and Surgere with the ability to influence our solution strategy.
